

EMPLOYMENT

FREELANCE DESIGN RESEARCHER (MAY 2022- AUGUST 2022)

- Researching non-profit funding models within the built environment for a recently incorporated Copenhagen-based philanthropic organisation. Alongside a team of 3 other remote researchers, I am developing new strategies for funding architecture projects that address climate change.

SOLUTIONS ENGINEER – SELDON, LONDON (MARCH 2021- FEBRUARY 2022)

- Seldon is a London-based start-up developing open-source software for deploying and managing machine learning models with reduced risk. I supported Seldon's global sales team in the successful closing of new business through providing technical enablement and building out POCs with potential clients. Solutions Engineers act as the primary technical point of contact for clients throughout the pre-sales process. I defined success criteria and value cases tailored to client business needs to clearly articulate the quantitate impact of Seldon's technologies.
- Led Solutions Engineering for partnerships and strategic alliances globally, working closely with Seldon's VP of Alliances to grow our partner ecosystem.
- Worked to resolve everyday customer challenges across the MLOps lifecycle through debugging issues, sharing solutions via Jupyter notebooks and providing architecture deep dives.
- Designed and delivered workshops to data scientists demonstrating training, containerising, deploying and monitoring models trained with the most popular machine learning frameworks, such as scikit-learn and TensorFlow.
- Frequently presented on technical subject matter at international events including AI Summit, NYC and MLOps World, Toronto.

AI INFRASTRUCTURE SPECIALIST – IBM, LONDON (DECEMBER 2018- FEBRUARY 2021)

- Provided pre-sales technical support on IBM's deep learning software and GPU-accelerated POWER hardware platform. Worked to define how IBM's technologies could address client challenges through meetings, workshops and POCs.
- Frequently presented on computer vision subject matter at events such as GIANT Healthcare London and Linuxing in London and for clients such as the University of Cambridge and Ford Innovation Lab.
- Led the development of computer vision prototypes built with Python, Node.js and TensorFlow. Two of these prototypes were showcased at THINK London, Cog X, Smart Manufacturing Liverpool and IBM Festival of Innovation.
- Organised IBM AI London meetups and built the community by 900 members over 7 months.

CREATIVE TECHNOLOGIST INTERN – IXDS (NOW PART OF PWC), BERLIN (MARCH 2018 – AUGUST 2018)

- Collaborated on the creation of an open-source toolkit of design research methods for a German automotive client.
- Integrated new features and debugged front-end prototypes for Europe's largest home appliance manufacturer prior to user-testing.

DESIGN RESEARCHER – BIODESIGN FOR SOCIAL IMPACT (NOVEMBER 2017- MARCH 2018)

- Created a futures research workshop exploring the creative potential of synthetic biology for Dutch Design Week 2017. The workshop was also delivered to students at Edinburgh College of Art (Biodesign Masters Programme) and Delft Technical University for 100+ postgraduate Industrial Design Students.

PUBLICATIONS & EXHIBITIONS

S. Greaves, J. Michalove, H. Paniutsich, and S. Smorodina, "Planetary Hair Care," *Tallinn Architecture Biennale* (2022)

A. D'Cruz, S. Greaves, L. Kermode & C. Tegho, "Detecting Tear Gas Canisters With Limited Training Data," *IEEE/CVF Winter Conference on Applications of Computer Vision* (2022)

E. Auer, S. Greaves, and J. Revans, "UK 2029," *Biodesign Challenge, MOMA NYC* (2017)

EDUCATION

PROGRAMMING RETREAT

RECURSE CENTER (AUGUST 2022 – OCTOBER 2022)

- The Recurse Center (RC) is an intentional community and self-directed academic environment for programmers of all levels to deepen their knowledge through working on self-directed projects and pair program. I am set to undertake a 12 week programming retreat at RC where I will focus on building tools for distributed knowledge production.

THE TERRAFORMING

STRELKA INSTITUTE FOR MEDIA, ARCHITECTURE & DESIGN (FEBRUARY 2022)

- The Terraforming was a 3 year research program at Strelka Institute directed by Benjamin H. Bratton and Nicolay Boyadjiev exploring the potential of planetary scale design to address climate change. I was awarded a fellowship alongside 29 international researchers to undertake the third and final 5 month cycle of the program. I developed research on geological histories of hearing, agricultural technologies through crop circles and planetary metabolisms of hair. The program was cancelled after the first month of research due to the Russian invasion of Ukraine.

MA DESIGN INFORMATICS – DISTINCTION

EDINBURGH COLLEGE OF ART & THE UNIVERSITY OF EDINBURGH (AUGUST 2016- JULY 2017)

- Design Informatics is a program that combines the craft of designers with the technologies of computer science. The course introduced me to physical computing, creative machine learning, design with data and synthetic biology.
- Dissertation exploring design of products and services through concepts of enclosure and ferality was awarded Distinction grade.

PORTFOLIO PREPARATION COURSE

THE GLASGOW SCHOOL OF ART (SEPTEMBER 2015- MARCH 2016)

BEng HONOURS MECHANICAL ENGINEERING – FIRST CLASS

THE UNIVERSITY OF EDINBURGH (AUGUST 2011- JULY 2015)

- During my 3rd year, I studied Mechanical Engineering at Michigan State University.
- Dissertation detailing the design of a system to measure chaotic dynamics was awarded Distinction grade.

SQA ADVANCED HIGHERS

ROBERT GORDON'S COLLEGE (AUGUST 2010 – JUNE 2011)

- MATHS (A1), PHYSICS (A1), FINE ART (A1) & MATHS MECHANICS (A1)

LANGUAGES

- Python, JavaScript (HTML, CSS), p5.js, Processing, MATLAB

FRAMEWORKS & TECHNOLOGIES

- Jupyter, PyTorch, scikit-learn, fast.ai, TensorFlow
- Docker, Seldon, Kubernetes, CircleCI,
- Node.js, Express, Redux, Leaflet, D3.js
- Raspberry Pi, Arduino, Linux,
- AWS, GCP
